

New Modular Cabinet Line Looking for Dealers

ANAHEIM, CA - Metal Line Cabinet Systems of Anaheim, CA, has announced it is now accepting applications for dealer/installers throughout the U.S. While the product line has been available in Southern California since February of this year, the company is now ready to move into nationwide distribution.

The Metal Line Cabinet System is built around a unique "H-panel," an internal frame constructed from 1 1/2" square steel tubing that provides the foundation for all of the other components. The adjustable shelves are supported by the frame, giving each shelf a rated capacity of 300 lbs. The doors and finished end-panels are formed from 18 ga. steel, and can be powder coated in virtually any color. The system features wall-mounted, bench, corner and floor cabinets, as well as a versatile drawer cabinet that can be outfitted with a variety of different drawer sizes. With widths ranging from 12 to 48," the system can be made to fit most spaces to within six inches. A variety of stainless steel, as well as maple butcher block tops complete the units.

Prospective dealers should have an established business catering to high-end home owners and be able to offer the one-on-one sales experience that this product line demands. In most cases, installation is included with the sale and in some locales must be performed by a licensed contractor. Dealers should be knowledgeable of their local building codes regarding this issue.

Metal Line is committed to dealer support and will offer a variety of sales materials and advertising, as well as maintaining a thorough website which includes dealer listings. The cabinets have an unusually high level of fit and finish for products in this category, and are designed to last as long as the structure into which they are installed. Complete details, as well as a dealer inquiry form, can be found on the company's website at www.metallinecabinets.com, or by calling (714) 255-8244.
